Education

University of Minnesota – Twin Cities

Expected May 2027

M.S., Computer Science

GPA: 3.933

Relevant Coursework: VR and 3D Interaction, Computer Graphics, Applied Parallel Programming, Data Mining, Robotics, Software Engineering

University of Minnesota – Twin Cities

May 2025

B.A., Computer Science, Minor in Statistics

GPA: 3.933

Graduated with Honors (Summa Cum Laude)

Relevant Coursework: Formal Languages & Automata Theory, Interactive Graphics and Games, Theory of Statistics, Regression and Correlated Data

Research Experience

Undergraduate Honors Thesis: Cybersickness as Affected by Self-Motion Perception Instructions

Thesis Advisor: Victoria Interrante

- Conducted a study of cybersickness and spatial awareness in users of identical VR applications, provided alternative instructions of self-based motion perception and environment-based motion perception.
- Independently conducted most portions of the study, including designing the parameters of the study, creating the VR application, creating materials for IRB review, advertising and gaining consent of participants, conducting participant sessions, and analyzing results.
- Instruction was shown to significantly affect user's perception of motion, even in identical VR applications.
- Further research was recommended to investigate effects of different types of motion perception.

Teaching Experience

Graduate Teaching Assistant

Fall 2025-Spring 2026

Formal Languages & Automata Theory – Instructor: Carl Sturtivant – Fall 2025

Discrete Structures of Computer Science – Instructor: James Moen – Spring 2026

Formal Languages & Automata Theory – Instructor: Alexi Brooks – Fall 2026 (present)

- Led weekly discussion sections with independently designed presentations and lesson plans
- Coordinated and reviewed undergraduate TAs' grading of assignments and exams
- Scored >5.0/6.0 on all individual Student Rating of Teaching (SRT) categories for Fall 2025 and Spring 2026 semesters.

Undergraduate Teaching Assistant:

Spring 2025

Formal Languages & Automata Theory – Instructor: Carl Sturtivant – Spring 2025

- Held weekly office hours with high repeat attendance of 5-10 students
- Majority of students regularly attending office hours passed the class with an A
- Graded assignments and exams

Selected Projects

VR Sign Language Calculator (Virtual Reality & 3D Interaction Final Project) – Fall 2024

Instructor: Victoria Interrante

Co-authors: Ekin Ercetin, Jacob Secunda

- Designed a user interface for sign language input using hand tracking in the Meta Quest 3
- Created a Unity calculator application that used the user interface with 17 unique hand gestures
- Conducted a small user study of intuitiveness and accuracy of the user interface

A Parallel GPU Algorithm for the Stepping Stone Puzzle (Applied Parallel Programming Final Project) – Fall 2025

Instructor: John Sartori

Co-author: Peter Weiblen

- Designed a parallel GPU algorithm to find solutions to the Stepping Stone Puzzle
- Algorithm was shown to be more efficient than equivalent CPU algorithms at $N \geq 4$, solving $N = 5$ in ~ 1.3 hours, compared to ~ 4 hours by the previous best algorithm

Multi-Camera Visual Tracking of Mobile Robots (Introduction to Intelligent Robotic Systems Final Project) – Fall 2025

Instructor: Nikolaos Papanikolopoulos

Co-authors: Max LaLonde, Alexandra Postolaki

- Created a Unity simulation of a multi-camera system tracking a mobile agent along a random path.
- Trained cameras to recognize the mobile agent using the YOLO v8 object detection algorithm.

Traffic Crash Prediction (Introduction to Data Mining Final Project) – Fall 2025

Instructor: Vipin Kumar

Co-authors: Rehan Ahmad, Ian Corsiga, Jeffrey Qian, Clayton Sparrow

- Created 2 models (logistic regression and artificial neural network) to predict locations of future traffic collisions in the Twin Cities metro given previous traffic collision and weather data.

Graphical Raytracer (Fundamentals of Computer Graphics 1 Project) – Spring 2026

Instructor: Victoria Interrante

- Built a C++ graphical raytracer from the ground up. Features include basic shapes, Blinn-Phong illumination, shadows, light-source attenuation, flat/smooth shading of triangles, texture mapping, normal mapping, transparency, reflection, and refraction.

Awards / Honors

Graduated with Honors (Summa Cum Laude), University of Minnesota – Twin Cities

Dean's List, University of Minnesota – Twin Cities, 2019-2024

Skills

Operating Systems: Windows, Linux

Languages: Java, Python, HTML, CSS, JavaScript, TypeScript, C, C++, C#, R, LaTeX

Tools: Unity, Meta Quest, Microsoft Office, Google Sheets, Autodesk Maya, VS Code, Git, GitHub, MatLab

Other: Music Theory (significant coursework), Game Design (some coursework & personal experience)
